

FACILITY MANAGEMENT

Battery Acid Spill Kits Small & Large

The Battery Acid Spill Kit is designed to handle the corrosive and vaporous properties of large and small acid spills from batteries during charging and changing. The kits include personal protective wear, various sorbents, neutralizer and clean up equipment.

Personal Protective Equipment

Traffic Vests Nitrile Gloves
Safety Glasses
Harnesses & Lanyards

One way to prevent injury at work is to wear proper personal protective gear. Some protective equipment is necessary for specific jobs, while other items are necessary for any work. Employers should know the hazards their workers face on the job, then provide the proper equipment to protect against those hazards.

Coldform Sorbents

Environmentally friendly ColdForm sorbents are made with different combinations of natural, renewable and recycled resources. They absorb 20% - 40% more than competing meltblown polypropylene.

MultiZorb Granular Absorbent

MultiZorb is a naturally mined, environmentally safe absorbent; it acts like a sponge and takes on the nature of the hazardous/non-hazardous absorbed liquid. But unlike a sponge, MultiZorb will not release the liquid even when under pressure. This is due to the encapsulation properties of this unique product. It is non-flammable and flame retardent.

Traffic Cones & Delineators

Safety and traffic cones and delineators are lightweight, portable plastic that are perfect for warning, guiding and delineating vehicles and equipment. They are constructed of tough, weather resistant high density polyethylene with UV inhibitors.

Signage

Danger and caution signs are a great medium to provide awareness and protect employees from potentially hazardous situations that may result in injury. We offer a Battery Rules poster to ensure proper handling of batteries and chargers.
